

# California Wine

## THE CANARY IN THE CLIMATE COAL MINE

### 9 IN 10 BOTTLES

California produces **90% of the nation's wine**. As the climate changes, some of that is shifting north to Oregon and Washington.

## > 50 %

### CALIFORNIA'S GROWING REGIONS

**More than half** of current wine growing areas could see significant yield declines with a temperature rise of 4°C.

### OUR CLIMATE-SMART SOLUTIONS

UC Davis is breeding wine grapes for **increased resilience**.  
We're advancing **precision irrigation** to improve water use efficiency.  
And running the world's first **LEED Platinum winery**.
