Food for a Healthy World: Monitoring Progress Towards Food Security

Please join us at a public session of a two-day workshop on this topic: visiting experts as well as our campus experts will present brief statements and findings of the workshop; this will be followed by discussion amongst panelists and audience members. A goal of the workshop is to create a strong, succinct and clear statement that represents a scientific consensus about progress made to date towards sustainable food and nutrition security and the contributing drivers and impediments. We believe such a consensus statement that reaches a wide and influential audience can contribute to the goals of faster and more effective progress to food for a healthy world.

Public Symposium
Thursday, June 4, 2015

This is a free event, but RSVP is requested.
